Context **GregorianTranscriptionStaff** can contain Section 2.1.3 [CueVoice], page 57 and Section 2.1.13 [GregorianTranscriptionVoice], page 106.

This context is built from the following engraver(s):

Section 2.2.1 [Accidental_engraver], page 231

Make accidentals. Catch note heads, ties and notices key-change events.

This engraver usually lives at Staff level, but reads the settings for Accidental at Voice level, so you can **\override** them at Voice.

Properties (read)

autoAccidentals (list)

List of different ways to typeset an accidental.

For determining when to print an accidental, several different rules are tried. The rule that gives the highest number of accidentals is used. Each entry in the list is either a symbol or a procedure.

symbol The symbol is the name of the context in which the following rules are

to be applied. For example, if *context* is [Section “Score” in *Internals Reference*](#) then all staves share accidentals, and if *context* is [Section “Staff” in *Internals Reference*](#) then all voices in the same staff share accidentals, but staves do not.

procedure The procedure represents an accidental rule to be applied to the previously specified context.

The procedure takes the following arguments:

context The current context to which the rule should be applied.

pitch The pitch of the note to be evaluated.

barnum The current bar number.

measurepos The current measure position.

The procedure returns a pair of booleans. The first states whether an extra natural should be added. The second states whether an accidental should be printed. (**#t** . **#f**) does not make sense.

autoCautionaries (list)

List similar to **autoAccidentals**, but it controls cautionary accidentals rather than normal ones. Both lists are tried, and the one giving the most accidentals wins. In case of draw, a normal accidental is typeset.

extraNatural (boolean)

Whether to typeset an extra natural sign before accidentals changing from a non-natural to another non-natural.

harmonicAccidentals (boolean)

If set, harmonic notes in chords get accidentals.

internalBarNumber (integer)

Contains the current barnumber. This property is used for internal timekeeping, among others by the **Accidental_engraver**.

keySignature (list)

The current key signature. This is an alist containing (*step* . *alter*) or ((*octave* .

`step) . alter)`, where *step* is a number in the range 0 to 6 and *alter* a fraction, denoting alteration. For alterations, use symbols, e.g. `keySignature = #`((6 . ,FLAT))`.

`localKeySignature` (list)

The key signature at this point in the measure. The format is the same as for `keySignature`, but can also contain `((octave . name) . (alter barnumber . measureposition))` pairs.

Properties (write)

`localKeySignature` (list)

The key signature at this point in the measure. The format is the same as for `keySignature`, but can also contain `((octave . name) . (alter barnumber . measureposition))` pairs.

Context `MensuralStaff` can contain [Section 2.1.3 \[CueVoice\], page 57](#) and [Section 2.1.16 \[MensuralVoice\], page 132](#).

This context is built from the following engraver(s):

Section 2.2.1 [Accidental_engraver], page 231

Make accidentals. Catch note heads, ties and notices key-change events. This engraver usually lives at `Staff` level, but reads the settings for `Accidental` at `Voice` level, so you can `\override` them at `Voice`.

Properties (read)

`autoAccidentals` (list)

List of different ways to typeset an accidental. For determining when to print an accidental, several different rules are tried. The rule that gives the highest number of accidentals is used. Each entry in the list is either a symbol or a procedure.

symbol The symbol is the name of the context in which the following rules are to be applied. For example, if *context* is [Section “Score” in Internals Reference](#) then all staves share accidentals, and if *context* is [Section “Staff” in Internals Reference](#) then all voices in the same staff share accidentals, but staves do not.

procedure The procedure represents an accidental rule to be applied to the previously specified context.

The procedure takes the following arguments:

`context` The current context to which the rule should be applied.

`pitch` The pitch of the note to be evaluated.

`barnum` The current bar number.

`measurepos` The current measure position.

The procedure returns a pair of booleans. The first states whether an extra natural should be added.

The second states whether an accidental should be printed. (`#t` . `#f`) does not make sense.

autoCautionaries (list)

List similar to **autoAccidentals**, but it controls cautionary accidentals rather than normal ones. Both lists are tried, and the one giving the most accidentals wins. In case of draw, a normal accidental is typeset.

extraNatural (boolean)

Whether to typeset an extra natural sign before accidentals changing from a non-natural to another non-natural.

harmonicAccidentals (boolean)

If set, harmonic notes in chords get accidentals.

internalBarNumber (integer)

Contains the current barnumber. This property is used for internal timekeeping, among others by the **Accidental_engraver**.

keySignature (list)

The current key signature. This is an alist containing (*step* . *alter*) or ((*octave* . *step*) . *alter*), where *step* is a number in the range 0 to 6 and *alter* a fraction, denoting alteration. For alterations, use symbols, e.g. `keySignature = #'((6 . ,FLAT))`.

localKeySignature (list)

The key signature at this point in the measure. The format is the same as for **keySignature**, but can also contain ((*octave* . *name*) . (*alter* *barnumber* . *measureposition*)) pairs.

Properties (write)

localKeySignature (list)

The key signature at this point in the measure. The format is the same as for **keySignature**, but can also contain ((*octave* . *name*) . (*alter* *barnumber* . *measureposition*)) pairs.

This context is built from the following engraver(s):

[Section 2.2.5 \[Axis_group_engraver\]](#), page 233

Group all objects created in this context in a `VerticalAxisGroup` spanner.

Properties (read)

`currentCommandColumn` (graphical (layout) object)

Grob that is X-parent to all current breakable (clef, key signature, etc.) items.

This engraver creates the following layout object(s):

[Section 3.1.130 \[VerticalAxisGroup\]](#), page 396.

[Section 2.2.7 \[Bar_engraver\]](#), page 234

Create barlines. This engraver is controlled through the `whichBar` property. If it has no bar line to create, it will forbid a linebreak at this point.

Properties (read)

`whichBar` (string)

This property is read to determine what type of bar line to create.

Example:

```
\set Staff.whichBar = "|:"
```

This will create a start-repeat bar in this staff only. Valid values are described in [Section “bar-line-interface” in Internals Reference](#).

Properties (write)

`forbidBreak` (boolean)

If set to `##t`, prevent a line break at this point.

ledger lines.

This engraver creates the following layout object(s):

Section 3.1.57 [LedgerLineSpanner], page 334.

Section 2.2.78 [Output_property_engraver], page 258

Music types accepted:

Section 1.2.3 [apply-output-event], page 39

Section 2.2.88 [Pitch_squash_engraver], page 261

property is set. This can be used to make a single-line staff demonstrat-
ing the rhythm of a melody.

Properties (read)

`squashedPosition` (integer)

Vertical position of squashing for **Section**
“Pitch-squash-engraver” in *Internals*
Reference.

Section 2.2.99 [Separating_line_group_engraver], page 264

Properties (read)

`createSpacing` (boolean)

Create `StaffSpacing` objects? Should be set for staves.

Properties (write)

`hasStaffSpacing` (boolean)

True if the current `CommandColumn` contains items that will affect spacing.

This engraver creates the following layout object(s):

[Section 3.1.100 \[StaffSpacing\]](#), page 369.

[Section 2.2.109 \[Staff_symbol_engraver\]](#), page 267

Properties (read)

`implicitTimeSignatureVisibility` (vector)

break visibility for the default time signature.

`timeSignatureFraction` (pair of numbers)

A pair of numbers, signifying the time signature. For example, `#'(4 . 4)` is a 4/4 time signature.

This engraver creates the following layout object(s):

[Section 3.1.119 \[TimeSignature\]](#), page 387.

2.1.20 Score

This is the top level notation context. No other context can contain a `Score` context. This context handles the administration of time signatures. It also makes sure that items such as clefs, time signatures, and key-signatures are aligned across staves.

You cannot explicitly instantiate a `Score` context (since it is not contained in any other context). It is instantiated automatically when an output definition (a `\score` or `\layout` block) is processed.

This context creates the following layout object(s):

[Section 3.1.12 \[BarNumber\]](#), page 295, [Section 3.1.21 \[BreakAlignGroup\]](#), page 301, [Section 3.1.22 \[BreakAlignment\]](#), page 302, [Section 3.1.46 \[GraceSpacing\]](#), page 325, [Section 3.1.58 \[LeftEdge\]](#), page 335, [Section 3.1.67 \[MetronomeMark\]](#), page 341, [Section 3.1.71 \[NonMusicalPaperColumn\]](#), page 346, [Section 3.1.79 \[PaperColumn\]](#), page 352, [Section 3.1.80 \[ParenthesesItem\]](#), page 353, [Section 3.1.85 \[RehearsalMark\]](#), page 357, [Section 3.1.97 \[SpacingSpanner\]](#), page 366, [Section 3.1.110 \[SystemStartBar\]](#), page 378, [Section 3.1.111 \[SystemStartBrace\]](#), page 378, [Section 3.1.112 \[SystemStartBracket\]](#), page 379, [Section 3.1.113 \[SystemStartSquare\]](#), page 380, [Section 3.1.129 \[VerticalAlignment\]](#), page 395, [Section 3.1.132 \[VoltaBracket\]](#), page 398 and [Section 3.1.133 \[VoltaBracketSpanner\]](#), page 399.

This context is built from the following engraver(s):

[Section 2.2.8 \[Bar_number_engraver\]](#), page 234

A bar number is created whenever `measurePosition` is zero and when there is a bar line (i.e., when `whichBar` is set). It is put on top of all staves, and appears only at the left side of the staff. The staves are taken from `stavesFound`, which is maintained by [Section 2.2.107 \[Staff_collecting_engraver\]](#), page 266.

Properties (read)

`barNumberVisibility` (procedure)

A Procedure that takes an integer and returns whether the corresponding bar number should be printed.

currentBarNumber (integer)

Contains the current barnumber. This property is incremented at every bar line.

stavesFound (list of grobs)

A list of all staff-symbols found.

whichBar (string)

This property is read to determine what type of bar line to create.

Example:

```
\set Staff.whichBar = "|:"
```

This will create a start-repeat bar in this staff only. Valid values are described in [Section “bar-line-interface”](#) in *Internals Reference*.

This engraver creates the following layout object(s):

[Section 2.2.13 \[Break_align_engraver\]](#), page 236

Align grobs with corresponding **break-align-symbols** into groups, and order the groups according to **breakAlignOrder**. The left edge of the alignment gets a separate group, with a symbol **left-edge**.

However, every `Bar_engraver` that does not have a barline at a certain point will set `forbidBreaks` in the score context to stop line breaks. In practice, this means that you can make a break point by creating a bar line (assuming that there are no beams or notes that prevent a break point).

Context `Staff` can contain [Section 2.1.3 \[CueVoice\]](#), [page 57](#) and [Section 2.1.27 \[Voice\]](#), [page 218](#).

This context is built from the following engraver(s):

[Section 2.2.1 \[Accidental_engraver\]](#), [page 231](#)

Make accidentals. Catch note heads, ties and notices key-change events. This engraver usually lives at `Staff` level, but reads the settings for `Accidental` at `Voice` level, so you can `\override` them at `Voice`.

Properties (read)

`autoAccidentals` (list)

List of different ways to typeset an accidental.

For determining when to print an accidental, several different rules are tried. The rule that gives the highest number of accidentals is used. Each entry in the list is either a symbol or a procedure.

symbol The symbol is the name of the context in which the following rules are to be applied. For example, if *context* is [Section “Score” in Internals Reference](#) then all staves share accidentals, and if *context* is [Section “Staff” in Internals Reference](#) then all voices in the same staff share accidentals, but staves do not.

procedure The procedure represents an accidental rule to be applied to the previously specified context.

The procedure takes the following arguments:

context The current context to which the rule should be applied.

pitch The pitch of the note to be evaluated.

barnum The current bar number.

measurepos The current measure position.

The procedure returns a pair of booleans. The first states whether an extra natural should be added. The second states whether an accidental should be printed. (`#t` . `#f`) does not make sense.

autoCautionaries (list)

List similar to **autoAccidentals**, but it controls cautionary accidentals rather than normal ones. Both lists are tried, and the one giving the most accidentals wins. In case of draw, a normal accidental is typeset.

extraNatural (boolean)

Whether to typeset an extra natural sign before accidentals changing from a non-natural to another non-natural.

harmonicAccidentals (boolean)

If set, harmonic notes in chords get accidentals.

internalBarNumber (integer)

Contains the current barnumber. This property is used for internal timekeeping, among others by the **Accidental_engraver**.

keySignature (list)

The current key signature. This is an alist containing (*step* . *alter*) or ((*octave* . *step*) . *alter*), where *step* is a number in the range 0 to 6 and *alter* a fraction, denoting alteration. For alterations, use symbols, e.g. `keySignature = #'((6 . ,FLAT))`.

localKeySignature (list)

The key signature at this point in the measure. The format is the same as for **keySignature**, but can also contain ((*octave* . *name*) . (*alter* *barnumber* . *measureposition*)) pairs.

Properties (write)

localKeySignature (list)

The key signature at this point in the measure. The format is the same as for **keySignature**, but can also contain ((*octave* . *name*) . (*alter* *barnumber* . *measureposition*)) pairs.

Context `VaticanaStaff` can contain [Section 2.1.3 \[CueVoice\]](#), page 57 and [Section 2.1.26 \[VaticanaVoice\]](#), page 206.

This context is built from the following engraver(s):

[Section 2.2.1 \[Accidental_engraver\]](#), page 231

Make accidentals. Catch note heads, ties and notices key-change events. This engraver usually lives at Staff level, but reads the settings for Accidental at Voice level, so you can `\override` them at Voice.

Properties (read)

`autoAccidentals` (list)

List of different ways to typeset an accidental. For determining when to print an accidental, several different rules are tried. The rule that gives the highest number of accidentals is used. Each entry in the list is either a symbol or a procedure.

symbol The symbol is the name of the context in which the following rules are to be applied. For example, if *context* is [Section “Score” in Internals Reference](#) then all staves share accidentals, and if *context* is [Section “Staff” in Internals Reference](#) then all voices in the same staff share accidentals, but staves do not.

procedure The procedure represents an accidental rule to be applied to the previously specified context.

The procedure takes the following arguments:

context The current context to which the rule should be applied.

pitch The pitch of the note to be evaluated.

barnum The current bar number.

measurepos The current measure position.

The procedure returns a pair of booleans. The first states whether an extra natural should be added. The second states whether an accidental should be printed. (**#t** . **#f**) does not make sense.

autoCautionaries (list)

List similar to **autoAccidentals**, but it controls cautionary accidentals rather than normal ones. Both lists are tried, and the one giving the most accidentals wins. In case of draw, a normal accidental is typeset.

extraNatural (boolean)

Whether to typeset an extra natural sign before accidentals changing from a non-natural to another non-natural.

harmonicAccidentals (boolean)

If set, harmonic notes in chords get accidentals.

internalBarNumber (integer)

Contains the current barnumber. This property is used for internal timekeeping, among others by the **Accidental_engraver**.

keySignature (list)

The current key signature. This is an alist containing (**step** . **alter**) or ((**octave** . **step**) . **alter**), where *step* is a number in the range 0 to 6 and *alter* a fraction, denoting alteration. For alterations, use symbols, e.g. **keySignature** = **#`((6 . ,FLAT))**.

localKeySignature (list)

The key signature at this point in the measure. The format is the same as for **keySignature**,

but can also contain `((octave . name) . (alter barnumber . measureposition))` pairs.

Properties (write)

`localKeySignature` (list)

The key signature at this point in the measure. The format is the same as for `keySignature`, but can also contain `((octave . name) . (alter barnumber . measureposition))` pairs.

2.2 Engravers and Performers

See [Section “Modifying context plug-ins” in *Notation Reference*](#).

2.2.1 Accidental_engraver

Make accidentals. Catch note heads, ties and notices key-change events. This engraver usually lives at Staff level, but reads the settings for Accidental at Voice level, so you can `\override` them at Voice.

Properties (read)

`autoAccidentals` (list)

List of different ways to typeset an accidental.

For determining when to print an accidental, several different rules are tried. The rule that gives the highest number of accidentals is used.

Each entry in the list is either a symbol or a procedure.

symbol The symbol is the name of the context in which the following rules are to be applied. For example, if *context* is [Section “Score” in *Internals Reference*](#) then all staves share accidentals, and if *context* is [Section “Staff” in *Internals Reference*](#) then all voices in the same staff share accidentals, but staves do not.

procedure The procedure represents an accidental rule to be applied to the previously specified context.

The procedure takes the following arguments:

`context` The current context to which the rule should be applied.

`pitch` The pitch of the note to be evaluated.

`barnum` The current bar number.

`measurepos` The current measure position.

The procedure returns a pair of booleans. The first states whether an extra natural should be added. The second states whether an accidental should be printed. (`#t . #f`) does not make sense.

`autoCautionaries` (list)

List similar to `autoAccidentals`, but it controls cautionary accidentals rather than normal ones. Both lists are tried, and the one giving the most accidentals wins. In case of draw, a normal accidental is typeset.

`extraNatural` (boolean)

Whether to typeset an extra natural sign before accidentals changing from a non-natural to another non-natural.

`harmonicAccidentals` (boolean)

If set, harmonic notes in chords get accidentals.

`internalBarNumber` (integer)

Contains the current barnumber. This property is used for internal timekeeping, among others by the `Accidental_engraver`.

keySignature (list)

The current key signature. This is an alist containing (*step* . *alter*) or ((*octave* . *step*) . *alter*), where *step* is a number in the range 0 to 6 and *alter* a fraction, denoting alteration. For alterations, use symbols, e.g. `keySignature = #'((6 . ,FLAT))`.

localKeySignature (list)

The key signature at this point in the measure. The format is the same as for **keySignature**, but can also contain ((*octave* . *name*) . (*alter* *barnumber* . *measureposition*)) pairs.

Properties (write)

associatedVoice (string)

Name of the **Voice** that has the melody for this **Lyrics** line.

autoAccidentals (list)

List of different ways to typeset an accidental.

For determining when to print an accidental, several different rules are tried. The rule that gives the highest number of accidentals is used.

Each entry in the list is either a symbol or a procedure.

symbol The symbol is the name of the context in which the following rules are to be applied. For example, if *context* is **Section “Score” in *Internals Reference*** then all staves share accidentals, and if *context* is **Section “Staff” in *Internals Reference*** then all voices in the same staff share accidentals, but staves do not.

procedure The procedure represents an accidental rule to be applied to the previously specified context.

The procedure takes the following arguments:

context The current context to which the rule should be applied.

pitch The pitch of the note to be evaluated.

barnum The current bar number.

measurepos

The current measure position.

The procedure returns a pair of booleans. The first states whether an extra natural should be added. The second states whether an accidental should be printed. (**#t** . **#f**) does not make sense.

autoBeamCheck (procedure)

A procedure taking three arguments, *context*, *dir* [start/stop (-1 or 1)], and *test* [shortest note in the beam]. A non-**#f** return value starts or stops the auto beam.

autoBeaming (boolean)

If set to true then beams are generated automatically.

autoCautionaries (list)

List similar to **autoAccidentals**, but it controls cautionary accidentals rather than normal ones. Both lists are tried, and the one giving the most accidentals wins. In case of draw, a normal accidental is typeset.

automaticBars (boolean)

If set to false then bar lines will not be printed automatically; they must be explicitly created with a **\bar** command. Unlike the **\cadenzaOn** keyword, measures are still

counted. Bar line generation will resume according to that count if this property is unset.

Method of handling slur collisions. Choices are `inside`, `outside`, `around`, and `ignore`. `inside` adjusts the slur if needed to keep the grob inside the slur. `outside` moves the grob vertically to the outside of the slur. `around` moves the grob vertically to the outside of the slur only if there is a collision. `ignore` does not move either. In grobs whose notational significance depends on vertical position (such as accidentals, clefs, etc.), `outside` and `around` behave like `ignore`.

`break-align-anchor (number):`

`ly:break-aligned-interface::calc-extent-aligned-anchor`

This key is used for aligning and spacing breakable items.

Distance between base lines of multiple lines of text.

break-align-symbols (list):

'(staff-bar clef)

A list of symbols that determine which break-aligned grobs to align this to. If the grob selected by the first symbol in the list is invisible due to break-visibility, we will align to the next grob (and so on). Choices are `left-edge`, `ambitus`, `breathing-sign`, `clef`, `staff-bar`, `key-cancellation`, `key-signature`, `time-signature`, and `custos`.

`break-visibility` (vector):

`##f #t #t`

A vector of 3 booleans, `##(end-of-line unbroken begin-of-line)`. `#t` means visible, `#f` means killed.

`direction` (direction):

1

If `side-axis` is 0 (or `#X`), then this property determines whether the object is placed `#LEFT`, `#CENTER` or `#RIGHT` with respect to the other object. Otherwise, it determines whether the object is placed `#UP`, `#CENTER` or `#DOWN`. Numerical values may also be used: `#UP=1`, `#DOWN=-1`, `#LEFT=-1`, `#RIGHT=1`, `#CENTER=0`.

`extra-spacing-width` (pair of numbers):

`'(+inf.0 . -inf.0)`

In the horizontal spacing problem, we pad each item by this amount (by adding the ‘car’ on the left side of the item and adding the ‘cdr’ on the right side of the item). In order to make a grob take up no horizontal space at all, set this to `(+inf.0 . -inf.0)`.

`font-size` (number):

2

The font size, compared to the ‘normal’ size. 0 is style-sheet’s normal size, -1 is smaller, +1 is bigger. Each step of 1 is approximately 12% larger; 6 steps are exactly a factor 2 larger. Fractional values are allowed.

`#t`

True if the grob belongs to a `NonMusicalPaperColumn`.

`outside-staff-priority` (number):

`padding` (dimension, in staff space):

0.8

Add this much extra space between objects that are next to each other.

`self-alignment-X` (number):

3.1.99 StaffGrouper

StaffGrouper objects are not created by any engraver.

Standard settings:

staff-staff-spacing (list):
 '((basic-distance . 9) (minimum-distance . 7) (padding . 1)
 (stretchability . 5))

When applied to a staff-group's `StaffGrouper` grob, this spacing alist controls the distance between consecutive staves within the staff-group. When applied to a staff's `VerticalAxisGroup` grob, it controls the distance between the staff and the nearest staff below it in the same system, replacing any settings inherited from the `StaffGrouper` grob of the containing staff-group, if there is one. This property remains in effect even when non-staff lines appear between staves. The alist can contain the following keys:

- **basic-distance** – the vertical distance, measured in staff-spaces, between the reference points of the two items when no collisions would result, and no stretching or compressing is in effect.

- **minimum-distance** – the smallest allowable vertical distance, measured in staff-spaces, between the reference points of the two items, when compressing is in effect.
- **padding** – the minimum required amount of unobstructed vertical whitespace between the bounding boxes (or skylines) of the two items, measured in staff-spaces.
- **stretchability** – a unitless measure of the dimension’s relative propensity to stretch. If zero, the distance will not stretch (unless collisions would result).

staffgroup-staff-spacing (list):

```
'((basic-distance . 10.5) (minimum-distance . 8) (padding .
1) (stretchability . 9))
```

The spacing alist controlling the distance between the last staff of the current staff-group and the staff just below it in the same system, even if one or more non-staff lines exist between the two staves. If the **staff-staff-spacing** property of the staff’s **VerticalAxisGroup** grob is set, that is used instead. See **staff-staff-spacing** for a description of the alist structure.

Standard settings:

```
direction (direction):
  1
  If side-axis is 0 (or #X), then this property determines whether the ob-
  ject is placed #LEFT, #CENTER or #RIGHT with respect to the other object.
  Otherwise, it determines whether the object is placed #UP, #CENTER or
  #DOWN. Numerical values may also be used: #UP=1, #DOWN=-1, #LEFT=-1,
  #RIGHT=1, #CENTER=0.
```

```
extra-spacing-width (pair of numbers):
  '(+inf.0 . -inf.0)
  In the horizontal spacing problem, we pad each item by this amount (by
  adding the ‘car’ on the left side of the item and adding the ‘cdr’ on the
  right side of the item). In order to make a grob take up no horizontal
  space at all, set this to (+inf.0 . -inf.0).
```

 `'italic`
 Select the shape of a font. Choices include `upright`, `italic`, `caps`.

padding (dimension, in staff space):
 `0.0`

This property remains in effect even when non-staff lines appear between staves. The alist can contain the following keys:

- **basic-distance** – the vertical distance, measured in staff-spaces, between the reference points of the two items when no collisions would result, and no stretching or compressing is in effect.
- **minimum-distance** – the smallest allowable vertical distance, measured in staff-spaces, between the reference points of the two items, when compressing is in effect.
- **padding** – the minimum required amount of unobstructed vertical whitespace between the bounding boxes (or skylines) of the two items, measured in staff-spaces.

If **staff-affinity** is CENTER, then **nonstaff-relatedstaff-spacing** is used for the nearest staves on *both* sides, even if other non-staff lines appear between the current one and either of the staves. See **staff-staff-spacing** for a description of the alist structure.

staff-affinity (direction)

The direction of the staff to use for spacing the current non-staff line. Choices are **UP**, **DOWN**, and **CENTER**. If **CENTER**, the non-staff line will be placed equidistant between the two nearest staves on either side, unless collisions or other spacing constraints prevent this. Setting **staff-affinity** for a staff causes it to be treated as a non-staff line. Setting **staff-affinity** to **#f** causes a non-staff line to be treated as a staff.

staff-staff-spacing (list)

When applied to a staff-group's **StaffGrouper** grob, this spacing alist controls the distance between consecutive staves within the staff-group. When applied to a staff's **VerticalAxisGroup** grob, it controls the distance between the staff and the nearest staff below it in the same system, replacing any settings inherited from the **StaffGrouper** grob of the containing staff-group, if there is one. This property remains in effect even when non-staff lines appear between staves. The alist can contain the following keys:

- **basic-distance** – the vertical distance, measured in staff-spaces, between the reference points of the two items when no collisions would result, and no stretching or compressing is in effect.
- **minimum-distance** – the smallest allowable vertical distance, measured in staff-spaces, between the reference points of the two items, when compressing is in effect.
- **padding** – the minimum required amount of unobstructed vertical whitespace between the bounding boxes (or skylines) of the two items, measured in staff-spaces.
- **stretchability** – a unitless measure of the dimension's relative propensity to stretch. If zero, the distance will not stretch (unless collisions would result).

The place of an annotation on a spanner. LEFT is for the first spanner, and RIGHT is for the last. CENTER will place it on the broken spanner that falls closest to the center of the length of the entire spanner, although this behavior is unpredictable in situations with lots of rhythmic diversity. For predictable results, use LEFT and RIGHT.

This grob interface is used in the following graphical object(s): [Section 3.1.10 \[BalloonTextItem\]](#), page 293, [Section 3.1.42 \[FootnoteItem\]](#), page 321 and [Section 3.1.43 \[FootnoteSpanner\]](#), page 322.

3.2.9 bar-line-interface

Bar line.

Print a special bar symbol. It replaces the regular bar symbol with a special symbol. The argument *bartype* is a string which specifies the kind of bar line to print. Options are |, :|, |: , |:|, |:|: , |:|: , ., ||, |., .|, .|., |.|, :, **dashed**, ' and **S**.

These produce, respectively, a normal bar line, a right repeat, a left repeat, a thick double repeat, a thin-thick-thin double repeat, a thin-thick double repeat, a thick bar, a double bar, a start bar, an end bar, a thick double bar, a thin-thick-thin bar, a dotted bar, a dashed bar, a tick as bar line and a segno bar.

In addition, there is an option ||: which is equivalent to |: except at line breaks, where it produces a double bar (||) at the end of the line and a repeat sign (|:) at the beginning of the new line.

For segno, **S** produces a segno sign except at line breaks, where it produces a double bar (||) at the end of the line and a segno sign at the beginning of the new line. **|S** is equivalent to **S** but produces a simple bar line (|) instead of a double bar line (||) at line breaks. **S|** produces the segno sign at line breaks and starts the following line without special bar lines.

S|: and **:|S** are used for repeat/segno combinations that are separated at line breaks. Alternatively, **.S|:** and **:|S.** may be used which combine repeat signs and segno at the same line in case of a line break. **:|S|:** is a combination of a left repeat (:|), a segno (**S**) and a right repeat |: which splits before the segno at line breaks; **:|S.|:** splits after the segno sign.

If *bartype* is set to **empty** then nothing is printed, but a line break is allowed at that spot.

gap is used for the gaps in dashed bar lines.

This grob interface is used in the following graphical object(s): [Section 3.1.47 \[GridLine\]](#), [page 326](#).

3.2.41 grid-point-interface

A spanning point for grid lines.

This grob interface is used in the following graphical object(s): [Section 3.1.48 \[GridPoint\]](#), [page 326](#).

3.2.42 grob-interface

A grob represents a piece of music notation.

All grobs have an X and Y position on the page. These X and Y positions are stored in a relative format, thus they can easily be combined by stacking them, hanging one grob to the side of another, or coupling them into grouping objects.

Each grob has a reference point (a.k.a. parent): The position of a grob is stored relative to that reference point. For example, the X reference point of a staccato dot usually is the note head that it applies to. When the note head is moved, the staccato dot moves along automatically.

A grob is often associated with a symbol, but some grobs do not print any symbols. They take care of grouping objects. For example, there is a separate grob that stacks staves vertically. The [Section 3.1.72 \[NoteCollision\]](#), [page 347](#) object is also an abstract grob: It only moves around chords, but doesn't print anything.

Grobs have properties (Scheme variables) that can be read and set. Two types of them exist: immutable and mutable. Immutable variables define the default style and behavior. They are shared between many objects. They can be changed using `\override` and `\revert`. Mutable properties are variables that are specific to one grob. Typically, lists of other objects, or results from computations are stored in mutable properties. In particular, every call to `ly:grob-set-property!` (or its C++ equivalent) sets a mutable property.

The properties `after-line-breaking` and `before-line-breaking` are dummies that are not user-serviceable.

User settable properties:

X-extent (pair of numbers)

Hard coded extent in X direction.

X-offset (number)

The horizontal amount that this object is moved relative to its X-parent.

Y-extent (pair of numbers)

Hard coded extent in Y direction.

Y-offset (number)

The vertical amount that this object is moved relative to its Y-parent.

after-line-breaking (boolean)

Dummy property, used to trigger callback for `after-line-breaking`.

avoid-slur (symbol)

Method of handling slur collisions. Choices are `inside`, `outside`, `around`, and `ignore`. `inside` adjusts the slur if needed to keep the

grob inside the slur. **outside** moves the grob vertically to the outside of the slur. **around** moves the grob vertically to the outside of the slur only if there is a collision. **ignore** does not move either. In grobs whose notational significance depends on vertical position (such as accidentals, clefs, etc.), **outside** and **around** behave like **ignore**.

before-line-breaking (boolean)

Dummy property, used to trigger a callback function.

color (color)

The color of this grob.

extra-X-extent (pair of numbers)

A grob is enlarged in X dimension by this much.

extra-Y-extent (pair of numbers)

A grob is enlarged in Y dimension by this much.

extra-offset (pair of numbers)

A pair representing an offset. This offset is added just before outputting the symbol, so the typesetting engine is completely oblivious to it. The values are measured in **staff-space** units of the staff's **StaffSymbol**.

layer (integer)

An integer which determines the order of printing objects. Objects with the lowest value of layer are drawn first, then objects with progressively higher values are drawn, so objects with higher values overwrite objects with lower values. By default most objects are assigned a layer value of 1.

minimum-X-extent (pair of numbers)

Minimum size of an object in X dimension, measured in **staff-space** units.

minimum-Y-extent (pair of numbers)

Minimum size of an object in Y dimension, measured in **staff-space** units.

outside-staff-horizontal-padding (number)

By default, an outside-staff-object can be placed so that it is very close to another grob horizontally. If this property is set, the outside-staff-object is raised so that it is not so close to its neighbor.

outside-staff-padding (number)

The padding to place between this grob and the staff when spacing according to **outside-staff-priority**.

outside-staff-priority (number)

If set, the grob is positioned outside the staff in such a way as to avoid all collisions. In case of a potential collision, the grob with the smaller **outside-staff-priority** is closer to the staff.

rotation (list)

Number of degrees to rotate this object, and what point to rotate around. For example, **#'(45 0 0)** rotates by 45 degrees around the center of this object.

springs-and-rods (boolean)

Dummy variable for triggering spacing routines.

- stencil** (stencil)
The symbol to print.
- transparent** (boolean)
This makes the grob invisible.
- whiteout** (boolean)
If true, the grob is printed over a white background to white-out underlying material, if the grob is visible. Usually `#f` by default.

Internal properties:

- axis-group-parent-X** (graphical (layout) object)
Containing X axis group.
- axis-group-parent-Y** (graphical (layout) object)
Containing Y axis group.
- cause** (any type)
Any kind of causation objects (i.e., music, or perhaps translator) that was the cause for this grob.
- cross-staff** (boolean)
For a beam or a stem, this is true if we depend on inter-staff spacing.
- interfaces** (list)
A list of symbols indicating the interfaces supported by this object. It is initialized from the `meta` field.
- meta** (list) Provide meta information. It is an alist with the entries `name` and `interfaces`.
- pure-Y-offset-in-progress** (boolean)
A debugging aid for catching cyclic dependencies.
- staff-symbol** (graphical (layout) object)
The staff symbol grob that we are in.

3.2.48 item-interface

Grobs can be distinguished in their role in the horizontal spacing. Many grobs define constraints on the spacing by their sizes, for example, note heads, clefs, stems, and all other symbols with a fixed shape. These grobs form a subtype called **Item**.

Some items need special treatment for line breaking. For example, a clef is normally only printed at the start of a line (i.e., after a line break). To model this, ‘breakable’ items (clef, key signature, bar lines, etc.) are copied twice. Then we have three versions of each breakable item: one version if there is no line break, one version that is printed before the line break (at the end of a system), and one version that is printed after the line break.

Whether these versions are visible and take up space is determined by the outcome of the **break-visibility** grob property, which is a function taking a direction (-1, 0 or 1) as an argument. It returns a cons of booleans, signifying whether this grob should be transparent and have no extent.

The following variables for **break-visibility** are predefined:

grob will show:		before	no	after
		break	break	break
all-invisible		no	no	no
begin-of-line-visible		no	no	yes
end-of-line-visible		yes	no	no
all-visible		yes	yes	yes
begin-of-line-invisible		yes	yes	no
end-of-line-invisible		no	yes	yes
center-invisible		yes	no	yes

#t means visible, **#f** means killed.

extra-spacing-height (pair of numbers)

In the horizontal spacing problem, we increase the height of each item by this amount (by adding the ‘car’ to the bottom of the item and adding the ‘cdr’ to the top of the item). In order to make a grob infinitely high (to prevent the horizontal spacing problem from placing any other grobs above or below this grob), set this to **(-inf.0 . +inf.0)**.

extra-spacing-width (pair of numbers)

In the horizontal spacing problem, we pad each item by this amount (by adding the ‘car’ on the left side of the item and adding the ‘cdr’ on the right side of the item). In order to make a grob take up no horizontal space at all, set this to `(+inf.0 . -inf.0)`.

non-musical (boolean)

True if the grob belongs to a `NonMusicalPaperColumn`.

- `space-to-barline` (boolean)
If set, the distance between a note and the following non-musical column will be measured to the bar line instead of to the beginning of the non-musical column. If there is a clef change followed by a bar line, for example, this means that we will try to space the non-musical column as though the clef is not there.

In grobs whose notational significance depends on vertical position (such as accidentals, clefs, etc.), **outside** and **around** behave like **ignore**.

Otherwise, it determines whether the object is placed **#UP**, **#CENTER** or **#DOWN**. Numerical values may also be used: **#UP=1**, **#DOWN=-1**, **#LEFT=-1**, **#RIGHT=1**, **#CENTER=0**.
- eccentricity** (number)

- line-thickness** (number)
 The thickness of the tie or slur contour.
- positions** (pair of numbers)
 Pair of staff coordinates (*left* . *right*), where both *left* and *right* are in **staff-space** units of the current staff. For slurs, this value selects which slur candidate to use; if extreme positions are requested, the closest one is taken.
- ratio** (number)

3.2.98 spacing-spanner-interface

The space taken by a note is dependent on its duration. Doubling a duration adds `spacing-increment` to the space. The most common shortest note gets `shortest-duration-space`. Notes that are even shorter are spaced proportional to their duration.

Typically, the increment is the width of a black note head. In a piece with lots of 8th notes, and some 16th notes, the eighth note gets a 2 note heads width (i.e., the space following a note is a 1 note head width). A 16th note is followed by 0.5 note head width. The quarter note is followed by 3 NHW, the half by 4 NHW, etc.

User settable properties:

average-spacing-wishes (boolean)

If set, the spacing wishes are averaged over staves.

base-shortest-duration (moment)

Spacing is based on the shortest notes in a piece. Normally, pieces are spaced as if notes at least as short as this are present.

common-shortest-duration (moment)

The most common shortest note length. This is used in spacing. Enlarging this sets the score tighter.

packed-spacing (boolean)

If set, the notes are spaced as tightly as possible.

shortest-duration-space (dimension, in staff space)

Start with this much space for the shortest duration. This is expressed in **spacing-increment** as unit. See also [Section “spacing-spanner-interface” in *Internals Reference*](#).

spacing-increment (number)

Add this much space for a doubled duration. Typically, the width of a note head. See also [Section “spacing-spanner-interface” in *Internals Reference*](#).

strict-grace-spacing (boolean)

If set, main notes are spaced normally, then grace notes are put left of the musical columns for the main notes.

strict-note-spacing (boolean)

If set, unbroken columns with non-musical material (clefs, bar lines, etc.) are not spaced separately, but put before musical columns.

uniform-stretching (boolean)

If set, items stretch proportionally to their durations. This looks better in complex polyphonic patterns.

This grob interface is used in the following graphical object(s): [Section 3.1.97 \[SpacingSpanner\]](#), page 366.

Represents left and right placement over the total spanner, where the width of the spanner is normalized between 0 and 1.

minimum-length (dimension, in staff space)

Try to make a spanner at least this long, normally in the horizontal direction. This requires an appropriate callback for the **springs-and-rods** property. If added to a **Tie**, this sets the minimum distance between noteheads.

to-barline (boolean)

If true, the spanner will stop at the bar line just before it would otherwise stop.

This grob interface is used in the following graphical object(s): [Section 3.1.14 \[BassFigureAlignment\]](#), [page 297](#), [Section 3.1.15 \[BassFigureAlignmentPositioning\]](#), [page 297](#), [Section 3.1.17 \[BassFigureContinuation\]](#), [page 298](#), [Section 3.1.18 \[BassFigureLine\]](#), [page 299](#), [Section 3.1.19 \[Beam\]](#), [page 299](#), [Section 3.1.20 \[BendAfter\]](#), [page 301](#), [Section 3.1.26 \[ClusterSpanner\]](#), [page 306](#), [Section 3.1.37 \[DynamicLineSpanner\]](#), [page 315](#), [Section 3.1.39 \[DynamicTextSpanner\]](#), [page 318](#), [Section 3.1.40 \[Episema\]](#), [page 319](#), [Section 3.1.43 \[FootnoteSpanner\]](#), [page 322](#), [Section 3.1.45 \[Glissando\]](#), [page 324](#), [Section 3.1.46 \[GraceSpacing\]](#), [page 325](#), [Section 3.1.49 \[Hairpin\]](#), [page 327](#), [Section 3.1.50 \[HorizontalBracket\]](#), [page 328](#), [Section 3.1.51 \[InstrumentName\]](#), [page 329](#), [Section 3.1.57 \[LedgerLineSpanner\]](#), [page 334](#), [Section 3.1.59 \[LigatureBracket\]](#), [page 336](#), [Section 3.1.60 \[LyricExtender\]](#), [page 337](#), [Section 3.1.61 \[LyricHyphen\]](#), [page 337](#), [Section 3.1.62 \[LyricSpace\]](#), [page 338](#), [Section 3.1.64 \[MeasureGrouping\]](#), [page 340](#), [Section 3.1.66 \[MensuralLigature\]](#), [page 341](#), [Section 3.1.68 \[MultiMeasureRest\]](#), [page 343](#), [Section 3.1.69 \[MultiMeasureRestNumber\]](#), [page 344](#), [Section 3.1.70 \[MultiMeasureRestText\]](#), [page 345](#), [Section 3.1.78 \[OttavaBracket\]](#), [page 351](#), [Section 3.1.81 \[PercentRepeat\]](#), [page 353](#), [Section 3.1.82 \[PercentRepeatCounter\]](#), [page 354](#), [Section 3.1.83 \[PhrasingSlur\]](#), [page 355](#), [Section 3.1.84 \[PianoPedalBracket\]](#), [page 356](#), [Section 3.1.94 \[Slur\]](#), [page 363](#), [Section 3.1.96 \[SostenutoPedalLineSpanner\]](#), [page 365](#), [Section 3.1.97 \[SpacingSpanner\]](#), [page 366](#), [Section 3.1.99 \[StaffGrouper\]](#), [page 368](#),

3.2.101 staff-grouper-interface

A grob that collects staves together.

User settable properties:

staff-staff-spacing (list)

When applied to a staff-group's **StaffGrouper** grob, this spacing alist controls the distance between consecutive staves within the staff-group. When applied to a staff's **VerticalAxisGroup** grob, it controls the distance between the staff and the nearest staff below it in the same system, replacing any settings inherited from the **StaffGrouper** grob of the containing staff-group, if there is one. This property remains in effect even when non-staff lines appear between staves. The alist can contain the following keys:

- **basic-distance** – the vertical distance, measured in staff-spaces, between the reference points of the two items when no collisions would result, and no stretching or compressing is in effect.
- **minimum-distance** – the smallest allowable vertical distance, measured in staff-spaces, between the reference points of the two items, when compressing is in effect.
- **padding** – the minimum required amount of unobstructed vertical whitespace between the bounding boxes (or skylines) of the two items, measured in staff-spaces.
- **stretchability** – a unitless measure of the dimension's relative propensity to stretch. If zero, the distance will not stretch (unless collisions would result).

staffgroup-staff-spacing (list)

The spacing alist controlling the distance between the last staff of the current staff-group and the staff just below it in the same system, even if one or more non-staff lines exist between the two staves. If the **staff-staff-spacing** property of the staff's **VerticalAxisGroup** grob is set, that is used instead. See **staff-staff-spacing** for a description of the alist structure.

space-to-barline (boolean)

If set, the distance between a note and the following non-musical column will be measured to the bar line instead of to the beginning of the non-musical column. prevent this. Setting **staff-affinity** for a staff causes it to be treated as a non-staff line. Setting **staff-affinity** to **#f** causes a non-staff line to be treated as a staff.

Maintain this much space between reference points and the staff. Its effect is to align objects of differing sizes (like the dynamics **p** and **f**) on their baselines.

staff-position (number)

Amount of space between staff lines, expressed in global **staff-space**.

staff-staff-spacing (list)

When applied to a staff-group's **StaffGrouper** grob, this spacing alist controls the distance between consecutive staves within the staff-group. When applied to a staff's **VerticalAxisGroup** grob, it controls the distance between the staff and the nearest staff below it in the same system, replacing any settings inherited from the **StaffGrouper** grob of the containing staff-group, if there is one. This property remains in effect even when non-staff lines appear between staves. The alist can contain the following keys:

- **basic-distance** – the vertical distance, measured in staff-spaces, between the reference points of the two items when no collisions would result, and no stretching or compressing is in effect.
- **minimum-distance** – the smallest allowable vertical distance, measured in staff-spaces, between the reference points of the two items, when compressing is in effect.
- **padding** – the minimum required amount of unobstructed vertical whitespace between the bounding boxes (or skylines) of the two items, measured in staff-spaces.
- **stretchability** – a unitless measure of the dimension's relative propensity to stretch. If zero, the distance will not stretch (unless collisions would result).

staffgroup-staff-spacing (list)

The spacing alist controlling the distance between the last staff of the current staff-group and the staff just below it in the same system, even if one or more non-staff lines exist between the two staves. If the **staff-staff-spacing** property of the staff's **VerticalAxisGroup** grob is set, that is used instead. See **staff-staff-spacing** for a description of the alist structure.
